About us

Capita Symonds is a wholly owned subsidiary of The Capita Group Plc – a FTSE 100 company and the leading provider of integrated professional support services solutions in the UK. Capita directly employs some 50,000 people.

Capita Symonds is one of the largest UK multidisciplinary consultancies with over 4000 staff located in more than 50 offices in the UK and internationally, providing consultancy in over 80 disciplines and operating in 20 business sectors. Our offering to clients is based upon fully understanding our client's needs and requirements, delivering practical and cost effective solutions and, when required, maintaining business continuity and operational use of business assets throughout the duration of projects.

In the Aviation Sector, Capita Symonds has formed long term relationships with a number of high profile aviation clients in both the UK and internationally. Our understanding of the worldwide aviation market, operations and industry practice enables us to provide a full range of consultancy, architectural, engineering and project management services to our clients. Our aviation specialists work alongside other professionals to provide a broad range of services including development and aviation regulatory guidance, design and engineering including review, cost and risk management, procurement and contract negotiations.

Case study – multidisciplinary

London Southend Airport

We are currently delivering a range of in-house design services to Stobart Developments Ltd in support of the airport's plan to extend the runway by 300m. Services provided include:

- Pavement design – runway extension and resurfacing of remainder of runway
- AGL layout design
- Airfield drainage review
- Civil engineering and highway design services for a road diversion
- Rail UTX support
- Design compliance and technical support in the preparation of documentation required by the CAA under CAP791

London Southend Airport runway extension

Case study – multidisciplinary

Heathrow Airport

We have recently completed a range of in-house design services for the development of the control post programme. Control Post 8 and Control Post 24a formed part of the programme which also included the redirection of the Southside road, amendments to the related infrastructure and relocation of a compactors compound. Services provided from feasibility to construction included:

- Architectural design
- Civil engineering and structural engineering design
- Transport design services for vehicle and pedestrian access to and within the Control Post
- Acoustic services
- Public health services
