Managed Services

Our sustainable solutions consultants are registered on the CIBSE Low Carbon Consultants Scheme and are registered energy assessors.

We can offer Energy Performance Certificates and Display Energy Certificates for new and existing buildings.

Why are display energy certificates important to my school?

It is a legal requirement for a school to display a DEC in a prominent place, clearly visible to the public, and have in its possession or control a valid advisory report.

The advisory report contains recommendations for improving the energy performance of the building.

DECs provide an energy rating of the building from A to G, where A is very efficient and G is the least efficient.

The rating is based on the actual amount of metered energy use over a period of 12 months.

What does a display energy certificate include?

- **A Display Energy Certificate** - is a A3 certificate which shows the energy performance of a building based on actual energy consumption.
- **The Advisory Report** - accompanies the DEC and contains recommendations for improving the energy performance of the building based on the investigation undertaken by the energy assessor.

How will my school benefit?

We will provide you with:

- a qualified, accredited non-domestic energy assessor
- a site visit and visual inspection to enable greater accuracy of the certificate and produce a tailored advisory report.
- a review of your energy consumption data
- support from our in-house energy bureau
- an operational rating, DEC and advisory report in line with the approved methodology
- registration of the DEC and advisory report in a national database
