CAPITA SYMONDS

successful people, projects and performance

providing a full range of environmental consultancy services and specialist skills

Capita Symonds offers a wide range of specialist environmental consultancy services, providing expert advice and support to clients needing to address increasingly regulated and complex environmental issues. Environmental services can be commissioned individually or as part of a fully integrated package.

Services range from policy and strategy through design development, planning and permitting to implementation and monitoring. Our work covers all sectors including communications, construction, leisure, natural resources, property, public services, security, technology and transport.

Our specialist services include:

air quality

aquatic resource management

conservation and heritage

contaminated land and remediation

countryside management

earth science and hydrogeology

ecology

environmental economics

environmental engineering

environmental impact assessment

gis services

landscape design

noise and acoustics

planning and urban design

regeneration

resource and wastes management

sustainability

water environment and flood risk

CAPITA SYMONDS

St Johns Wood to Hackney Tunnel & St Johns Wood to Willesden Tunnel, National Grid

We provide multidisciplinary environmental, transport, planning and design advice to National Grid on the installation of these two north London underground cabling tunnels.

Catchment Flood Management Plans, Environment Agency

Capita Symonds is leading, or has been involved in over 14 CFMPs including the Cuckmere, Ouse, Arun, Adur, Wye and Usk. In addition to identifying future catchment flood management policies this work includes undertaking Strategic Environmental Assessments and Appropriate Assessments.

Stanwell New Start, A2 Housing Group

Our appointment includes the management of planning applications and requirements associated with a 372 unit phased residential development in Staines, Middlesex. Maintaining open space and providing like-for-like housing for existing residents were key targets.

The O2 Arena, AEG

Acoustic modelling techniques were used to provide the design specification for both the auditorium and surrounding buildings and to determine the construction of the auditorium shell with particular attention paid to performance of the lightweight roof.

Ecology, A249 DFBO

Our ecologists have been actively involved in preparing and administering mitigation treatments for, and translocation of, protected species and undertaking 5 year post-construction ecological monitoring. The scheme received the ICE Regional Branch Thomas Brassey Major Projects award.

Olympic Park Development, LDA

Teams from across Capita Symonds contributed to, or led, the EIA, environmental statements, site investigation, remediation strategy, archaeological investigation, groundwater modelling, transport logistics appraisal and development of the GIS Portal in support of the Olympic Bid.

Defence Training Review, Welsh Assembly Government

We are undertaking baseline ecological surveys for habitats and species including bats, great-crested newt, dormouse, otter, birds, reptiles, woodlands and grasslands. These will inform a nationally important development proposed by the Welsh Assembly Government and MoD in and around the St Athan air base, South Wales.

A69 Haydon Bridge Bypass

Site supervision of environmental mitigation and protection measures; preparation of Construction Environmental Management Plan; liaison between statutory bodies, site staff and client; support of environmental best practice in construction and input to CEEQUAL (The Civil Engineering Environmental Quality and Assessment Scheme).
