

CAPITA BOBROWSKI

state of the art structural engineering design

STATE OF THE ART STRUCTURAL ENGINEERING DESIGN

Capita Bobrowski has evolved through an organic acquisition and mergers process to create a cohesive and extensive framework of design expertise which is difficult to find or surpass in any one single organisation of its size in existence today.

We are committed to the basic concepts of sustainable structural engineering design and maintaining the ideals and ethics of professional structural engineers. We have a tradition of design excellence with the experience and staff to carry out a wide variety of engineering projects both large and small.

Our projects reflect the design synergy that exists between engineer, architect and environment. The practice has a strong philosophy of blending the built environment with structures that are visually challenging and that build on the client's brief and desires.
