CAPITA SYMONDS

successful people, projects and performance

a complete security and safety consultancy service

Over recent years, security has risen in importance. Businesses and Central and Local Government are all at risk from different threats whether physical, virtual or intellectual, leaving themselves vulnerable.

Management of security is an important aspect of business continuity, which needs to be an integral part of the business and controlling the risks is an essential part in ensuring the continued success of all organisations. Capita Symonds offers a comprehensive range of security consultancy services covering all aspects of technical security, both physical and electronic, operational security, and the management of risk, to mitigate against crime and terrorism.

advice

- asset identification
- business analysis
- business impact appraisal
- classification and management of information
- funding and cost evaluation
- maintenance management
- manned guarding
- operational review/audits
- pass systems
- procurement strategy
- security policy documentation
- security procedures documentation
- security reviews
- security strategy development
- staff and contractor screening
- technical reviews/audits
- threat and risk assessment
- training
- user requirement definition
- vulnerability analysis

implementation

- contract documentation development
- contract procurement
- design and specification
- project management
- site supervision
- training

technology

- access control systems
- asset tagging systems
- biometrics
- CCTV and surveillance
- control of access
- control rooms
- digital recording systems
- doors, glazing and louvers
- electronic counter measures
- fencing, gate and barriers
- integrated security systems
- intruder detection systems
- key and key control
- locks and locking systems
- machine vision
- perimeter intruder detection systems
- secure compounds
- secure containers and safes
- security hatches
- tracking and monitoring
- transmission systems including IP

CAPITA SYMONDS

City of London Security Zone

Capita Symonds was appointed as lead consultants to implement the City of London Security Zone. It was the first wide area 'controlled' zone in the UK and incorporates leading edge technology to track and monitor vehicles entering and leaving.

British Ports Security

Capita Symonds is working with the UK Government in implementing integrated security systems to monitor vehicles entering and leaving the UK. These systems incorporate advanced technology that allows real time tracking of vehicles.

Town Centre CCTV

Capita Symonds manages development of borough wide area CCTV systems. These systems are state-of-the-art, incorporating advanced operational management software and unique control facilities to allow interoperability between differing manufacturers' sub systems.

Greenwich Peninsular

Engaged by English Partnerships to review security, in particular the Dome, recently renamed as O2, we developed operational and tactical requirements in conjunction with the Metropolitan Police. Subsequently, we helped with the delivery of the security during the commissioning of the site.

Border Control

Working for the UK Government we explored possible institutional and technological requirements for effective and robust control of people, goods and vehicles at border locations in sensitive areas of the world. Our work included proposals for state-of-the-art smart cards.

Secure Data Centres

Starting with reviewing the security requirements we have produced technical designs for security and access control systems and project managed the implementation of these security solutions including CCTV, door access control and perimeter security for a number of clients.

Farnborough Business Park

Our involvement started with due diligence and with our traffic and transport, highways and services engineers we developed the masterplan for the business park. Being involved from day one enabled the development to be awarded 'Secure by Design'. Thereafter we undertook detailed design of the site wide security system and assisted with the detailed co-ordination and delivery of the scheme.

Mauritius Port Authority

Engaged to ensure compliance with the ISPS Code, we carried out a complete review of security of the port. Within our findings we identified the needs for CCTV, gatehouses, access control, lighting and new communications systems. Included within our recommendations were proposals for revising the port policing, and implementing new procedures.
